

VARIABLE HEAD PERMEABILITY TEST (STANDPIPE PIEZOMETER)

TYPE OF TEST: **FALLING HEAD TEST**

Contract: Forth Road Crossing

BH No: CSRO03A

Test No: 1

Date: 5-Feb-12

Aquifer Unit: Sandstone

Datum	0.35	mAGL
Depth of hole	5.85	mbd
Diameter of standpipe (d):	0.05	(m)
Screen Length	2.00	(m)
Diameter of filter (D):	0.1	(mm)
Rest water level	3.75	mbd on: 15-Feb-12

Formula (d) has been used for calculating shape factor. See Figure 6. Though the test section is not of infinite depth, this equation should still predict k to a good degree of accuracy as demonstrated in CIRIA Report 113.

$$F = 3.405978435$$

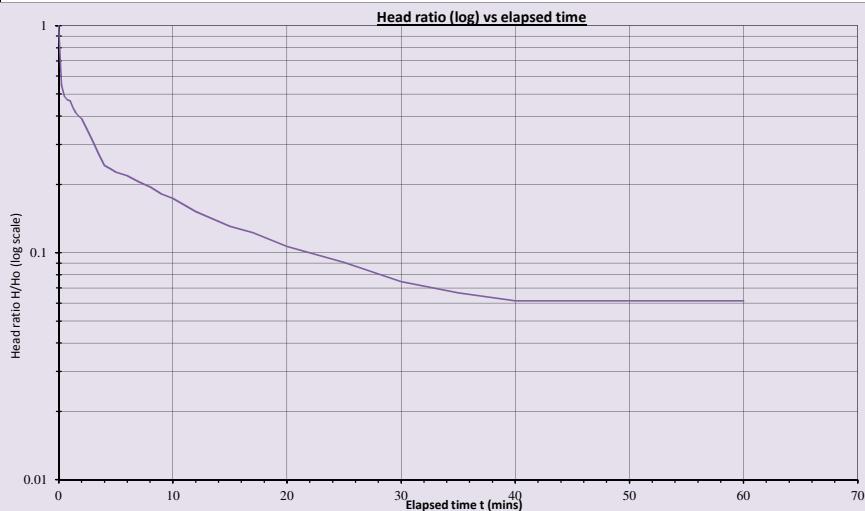

$$A = 0.001963495 \text{ (m}^2\text{)}$$

$t_1 =$	3.5	H_{1z}	1.02
$t_2 =$	12	H_{2z}	0.57

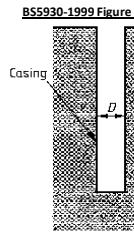

$$k = 6.58E-07 \text{ m/sec}$$

$$k = 0.0568 \text{ m/day}$$

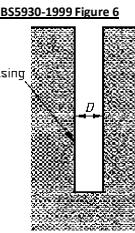

Elapsed Time (mins)	Water Level (m)	Head H (m)	Head ratio H/H ₀
0	0.00	3.75	1
0.25	1.70	2.05	0.547
0.5	1.92	1.83	0.488
0.75	1.98	1.77	0.472
1	2.00	1.75	0.467
1.25	2.12	1.63	0.435
1.5	2.20	1.55	0.413
1.75	2.25	1.5	0.400

3.5	2.73	1.02	0.272
4	2.84	0.91	0.243
4.5	2.87	0.88	0.235
5	2.90	0.85	0.227
6	2.93	0.82	0.219
7	2.98	0.77	0.205
8	3.02	0.73	0.195
9	3.07	0.68	0.181
10	3.1	0.65	0.173
12	3.18	0.57	0.152
15	3.26	0.49	0.131
17	3.29	0.46	0.123
20	3.35	0.4	0.107
25	3.41	0.34	0.091
30	3.47	0.28	0.075
35	3.5	0.25	0.067
40	3.52	0.23	0.061
45	3.52	0.23	0.061
50	3.52	0.23	0.061
55	3.52	0.23	0.061
60	3.52	0.23	0.061

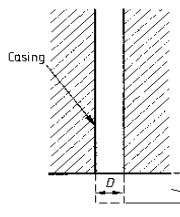

Check	t37=	2.2
k=	4.367E-06	m/sec
k=	0.3773356	m/day

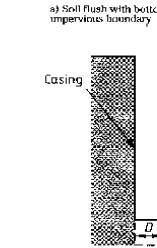

$$F = 2D$$

$$F \approx 2.75D$$

$$F = \frac{2\pi L}{\log_e \left[\left(L/D \right) + \sqrt{1 + \left(L/D \right)^2} \right]}$$

$$F = \frac{2\pi L}{\log_e \left[\left(L/D \right) + \sqrt{1 + \left(L/D \right)^2} \right]}$$

d) Well point or hole extended in uniform soil

$$F = \frac{2D}{1 + (8/\pi)(L/D)}$$

e) Soil in casing with bottom at impervious boundary

$$F = \frac{2.75D}{1 + (11\pi)(L/D)}$$

f) Soil in casing with bottom in uniform soil

NOTE 1 Expressions come from Hvorslev [57].

NOTE 2 Values are for use primarily in tests carried out through the open ends of boreholes.

NOTE 3 Case d) may be used for tests carried out using piezometer tips, but more accurate results are obtained by using Figure 7, especially for values of $(L/D) > 2$.

NOTE 4 Cases e) and f) assume the permeability of the soil in the casing to be the same as that below it. Where this is not so, see [57].

NOTE 5 Cases a) and b) tend to measure the mean permeability of the soil; c) and d) the vertical permeability; e) and f) the horizontal permeability. Where the horizontal permeability is much greater than the vertical permeability, all tests tend to measure the former.

VARIABLE HEAD PERMEABILITY TEST (STANDPIPE PIEZOMETER)

TYPE OF TEST: **FALLING HEAD TEST**

Contract: Forth Road Crossing

BH No: CSRO03B

Test No: 1

Date: 5-Feb-12

Aquifer Unit: Sandstone

Datum	0.34	mAGL
Depth of hole	6.34	mbd
Diameter of standpipe (d):	0.05	(m)
Screen Length:	4.00	(m)

VARIABLE HEAD PERMEABILITY TEST (STANDPIPE PIEZOMETER)

TYPE OF TEST: **FALLING HEAD TEST**

Contract: Forth Road Crossing

BH No: CSRO09A

Test No: 1

Date: 6-Feb-12

Aquifer Unit: Dolerite

Datum	0.20	mAGL
Depth of hole	4.7	mbd
Diameter of standpipe (d):	0.05	(m)
Screen Length	2.10	(m)
Diameter of filter (D):	0.1	(mm)
Rest water level	1.17	mbd on: 6-Feb-12

Formula (d) has been used for calculating shape factor. See Figure 6. Though the test section is not of infinite depth, this equation should still predict k to a good degree of accuracy as demonstrated in CIRIA Report 113.

$$F = 3.529656511$$

$$A = 0.001963495 \text{ (m}^2\text{)}$$

$t_1 =$	0.25	H_{1z}	0.3
$t_2 =$	1.25	H_{2z}	0.02

$$k = 2.51E-05 \text{ m/sec}$$

$$\boxed{k = 2.1693 \text{ m/day}}$$

Check	$t_{37} =$	0.2
k=	4.64E-05 m/sec	
k=	4.0052529 m/day	

Elapsed Time (mins)	Water Level (m)	Head (m)	Head ratio H/Ho
0	0.00	1.17	1
0.25	0.87	0.3	0.256
0.5	1.06	0.11	0.094
0.75	1.11	0.06	0.051
