

- Legend:
- New culvert/extension
  - - - Retained culvert
  - Realigned/regraded channel
  - Cascade
  - Inlet/outlet headwall (new)
  - - - Inlet/outlet headwall (retained)
  - Pre-earthworks drain and outfall
  - Access chamber
  - Flow direction
  - IL Invert Level

- Notes:
1. All dimensions are in meters unless noted otherwise.
  2. All levels are in meters above ordnance datum.
  3. All details shown on this drawing are indicative only and subject to development at detailed design.
  4. This drawing shall be read in conjunction with the 'Watercourse Crossing report' only and not in isolation.
  5. All 'new' and 'extended' culverts have been designed in accordance with the relevant provisions of DMRB.
  6. Where required 'scour protection measures' shall be provided within the zone indicated on the drawing. The nature and the extent of the scour protection measure will be further developed at detailed design stage in accordance with the relevant provisions of DMRB, taking into account flow hydraulics, channel geometry and channel morphology.
  7. Where shown culverts shall be 'embedded' with natural river deposits to the depth shown.
  8. Where shown 'cascades' are required to safely convey the design flood event (0.5% AEP (200-year) plus allowance for climate change). The cascade geometry shown on the drawing is indicative only and will be subject to further development at detailed design stage. The nature of the cascade will take one of the following forms,
    - Bedrock channel cascade.
    - Natural cascade with natural gravels, cobbles and rock forming individual steps.
    - Concrete cascade with stone pitching.
 The nature of the cascade will be determined at the detailed design stage taking into account hydraulic requirements, topography and nature of the underlying strata and its susceptibility to fluvial erosion.
  9. Where shown mammal ledges will be provided within the culvert in accordance with the relevant provisions of DMRB.

SAFETY, HEALTH AND ENVIRONMENTAL INFORMATION	
In addition to the hazards/risks normally associated with the types of work detailed on this drawing, note the following:	
<b>CONSTRUCTION</b>	
-	Service survey required pre-construction
-	Condition of existing structure may not be as anticipated
-	Existing structure may not be accurately represented by record drawings
-	Position of existing structure may not be as shown
<b>MAINTENANCE / CLEANING</b>	
-	None
<b>DECOMMISSIONING / DEMOLITION</b>	
-	None
It is assumed that all works will be carried out by a competent contractor working, where appropriate, to an approved method statement

**KILLIECRANKIE TO GLEN GARRY RIVER GARRY UNDERBRIDGE GENERAL ARRANGEMENT**

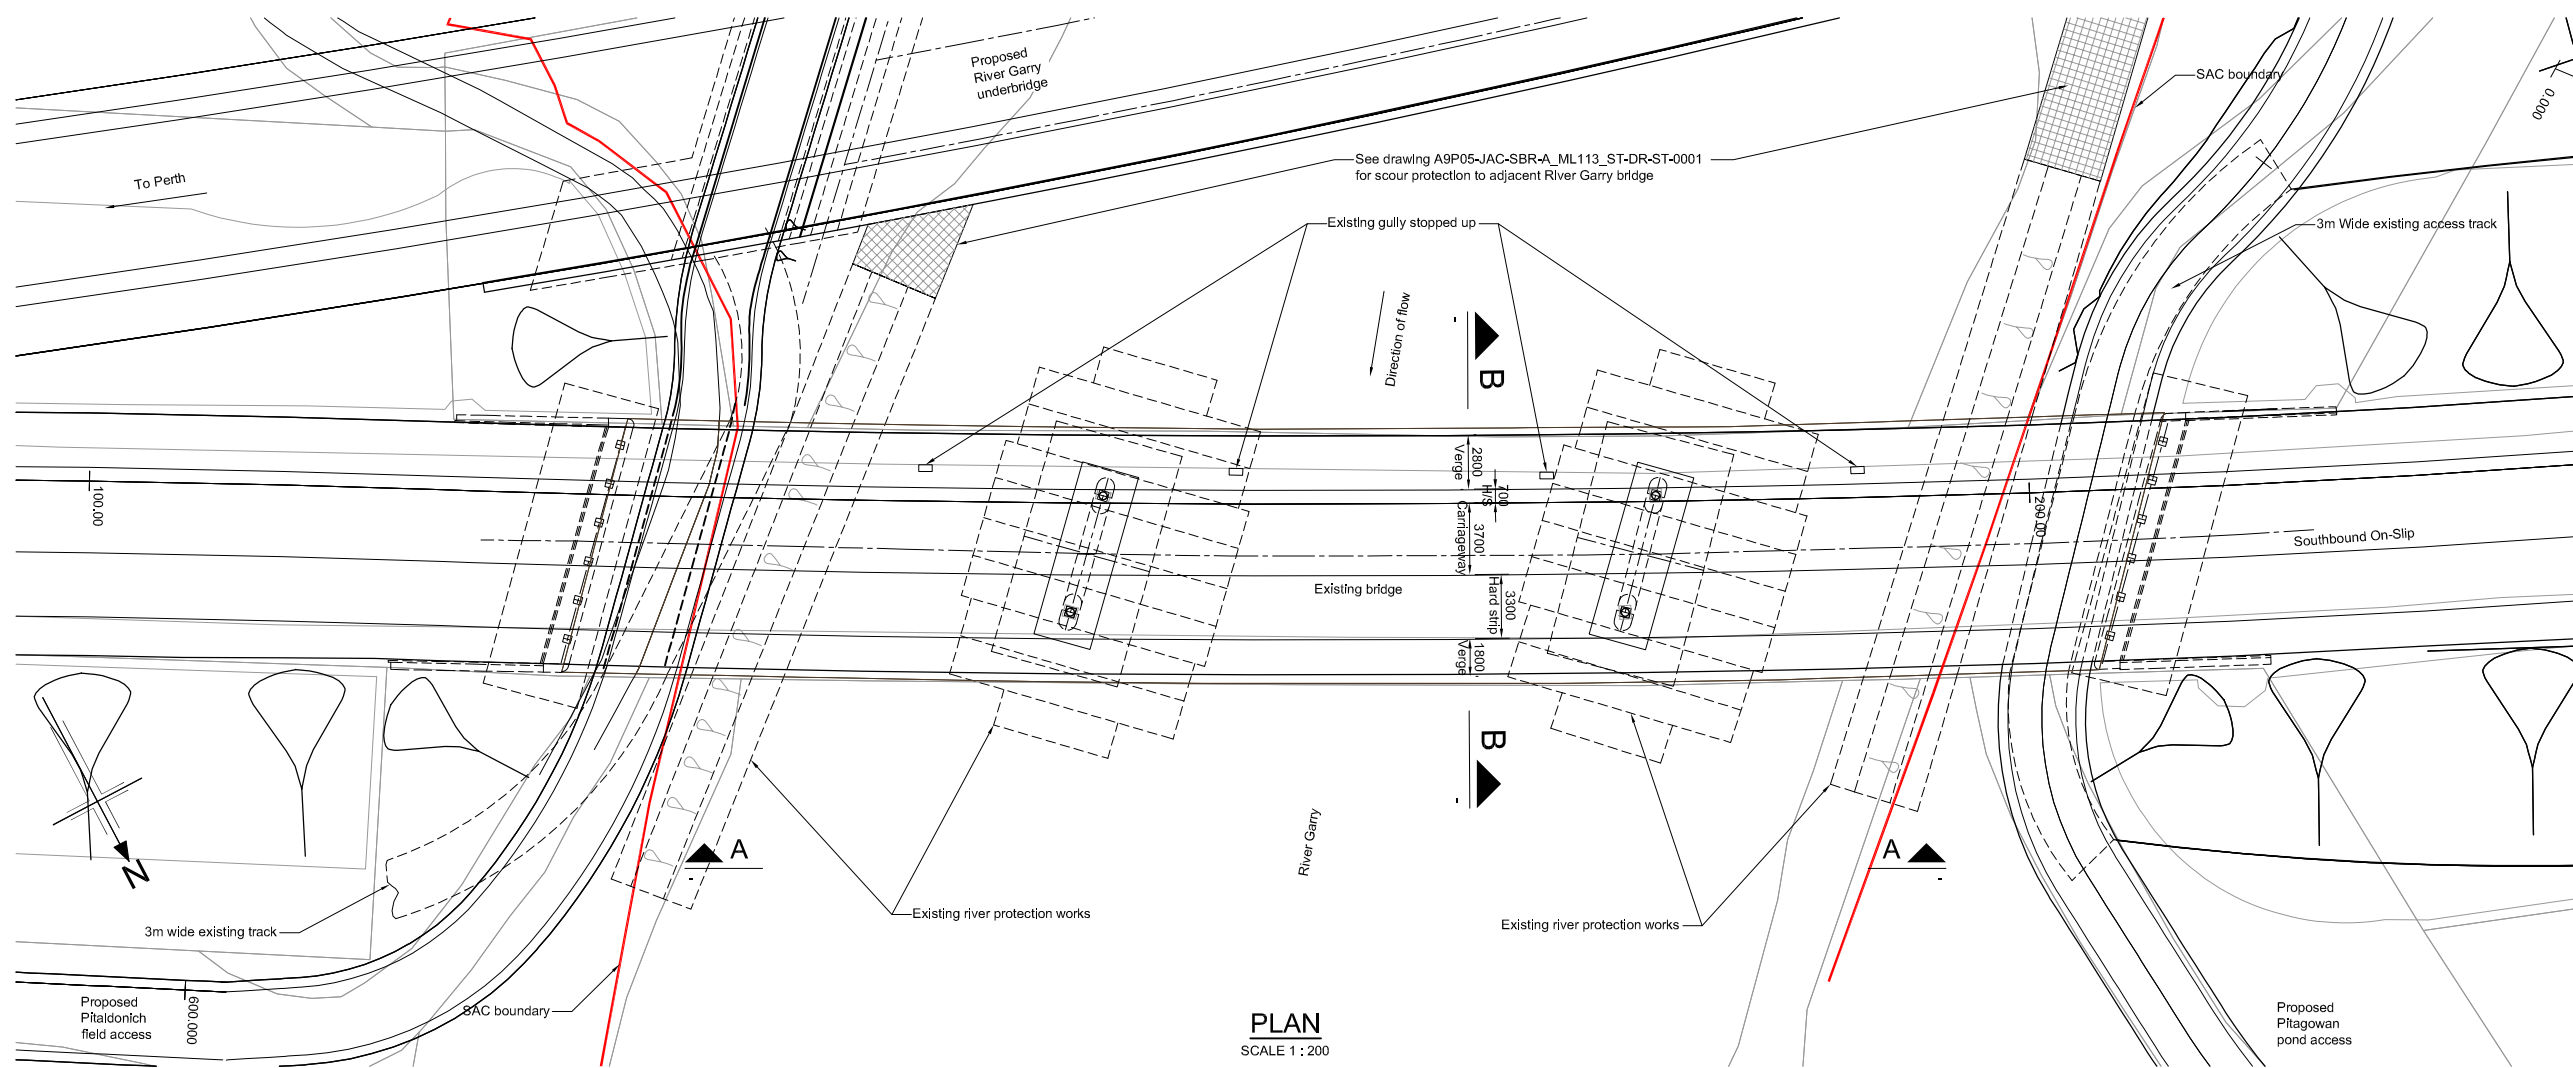

Drawing status: **PRELIMINARY**

Scale	AS SHOWN @ A1	DO NOT SCALE
Jacobs No.	B2140005	

Drawing number: **Figure A.11.8.34(a)** Rev P2

This drawing is not to be used in whole or part other than for the intended purpose and project as defined on this drawing. Refer to the contract for full terms and conditions.

**PLAN**  
SCALE 1 : 200

- Notes.
- All dimensions are in millimetres unless noted otherwise.
  - All levels are in metres Above Ordnance Datum.
  - All chainages are in metres.
  - All exposed arrises to have 25x25 chamfers unless noted otherwise.
  - Concrete finishes denoted thus:  
 (F) - Formed  
 (U) - Unformed
  - Concrete protection to be as follows:  
 (S) - Surface impregnation in accordance with BD43 of the DMRB.  
 (A) - Spray applied waterproofing in accordance with CI 2003 of the Specification.  
 (B) - Waterproofing of all buried concrete surfaces in accordance with CI 2004 of the Specification.
  - All details shown on this drawing are indicative only and subject to development.

SAFETY, HEALTH AND ENVIRONMENTAL INFORMATION	
In addition to the hazards/risks normally associated with the types of work detailed on this drawing, note the following:	
<b>CONSTRUCTION</b>	
<ul style="list-style-type: none"> <li>Service survey required pre-construction</li> <li>Potential presence in existing structure of harmful substances causing damage to health to be established pre-demolition.</li> <li>Structure stability to be checked during break-out of existing structure</li> <li>Condition of existing structure may not be as anticipated.</li> <li>Existing structure may not be accurately represented by record drawings.</li> <li>Position of existing structure may not be as shown</li> </ul>	
<b>MAINTENANCE / CLEANING</b>	
<ul style="list-style-type: none"> <li>None</li> </ul>	
<b>DECOMMISSIONING / DEMOLITION</b>	
<ul style="list-style-type: none"> <li>None</li> </ul>	
It is assumed that all works will be carried out by a competent contractor working, where appropriate, to an approved method statement

PITALDONICH UNDERBRIDGE  
GENERAL ARRANGEMENT**

Drawing status: **PRELIMINARY**

Scale	AS SHOWN @ A1	DO NOT SCALE
Jacobs No.	B2140005	

Drawing number: **Figure A.11.8.34(b)** Rev P1

This drawing is not to be used in whole or part other than for the intended purpose and project as defined on this drawing. Refer to the contract for full terms and conditions.

- Legend:**
- New culvert/extension
  - - - Retained culvert
  - Realigned/regraded channel
  - Cascade
  - Inlet/outlet headwall (new)
  - - - Inlet/outlet headwall (retained)
  - Pre-earthworks drain and outfall
  - Access chamber
  - Flow direction
  - IL Invert Level

- Notes:**
1. All dimensions are in meters unless noted otherwise.
  2. All levels are in meters above ordnance datum.
  3. All details shown on this drawing are indicative only and subject to development at detailed design.
  4. This drawing shall be read in conjunction with the 'Watercourse Crossing report' only and not in isolation.
  5. All 'new' and 'extended' culverts have been designed in accordance with the relevant provisions of DMRB.
  6. Where required 'scour protection measures' shall be provided within the zone indicated on the drawing. The nature and the extent of the scour protection measure will be further developed at detailed design stage in accordance with the relevant provisions of DMRB, taking into account flow hydraulics, channel geometry and channel morphology.
  7. Where shown culverts shall be 'embedded' with natural river deposits to the depth shown.
  8. Where shown 'cascades' are required to safely convey the design flood event (0.5% AEP (200-year) plus allowance for climate change). The cascade geometry shown on the drawing is indicative only and will be subject to further development at detailed design stage. The nature of the cascade will take one of the following forms,
    - Bedrock channel cascade.
    - Natural cascade with natural gravels, cobbles and rock forming individual steps.
    - Concrete cascade with stone pitching.
 The nature of the cascade will be determined at the detailed design stage taking into account hydraulic requirements, topography and nature of the underlying strata and its susceptibility to fluvial erosion.
  9. Where shown mammal ledges will be provided within the culvert in accordance with the relevant provisions of DMRB.

SCHEMATIC PLAN

WATERCOURSE 139 LONGSECTION

- Legend:
- New culvert/extension
  - - - Retained culvert
  - Realigned/regraded channel
  - Cascade
  - Inlet/outlet headwall (new)
  - - - Inlet/outlet headwall (retained)
  - Pre-earthworks drain and outfall
  - Access chamber
  - Flow direction
  - IL Invert Level

- Notes:
1. All dimensions are in meters unless noted otherwise.
  2. All levels are in meters above ordnance datum.
  3. All details shown on this drawing are indicative only and subject to development at detailed design.
  4. This drawing shall be read in conjunction with the 'Watercourse Crossing report' only and not in isolation.
  5. All 'new' and 'extended' culverts have been designed in accordance with the relevant provisions of DMRB.
  6. Where required 'scour protection measures' shall be provided within the zone indicated on the drawing. The nature and the extent of the scour protection measure will be further developed at detailed design stage in accordance with the relevant provisions of DMRB, taking into account flow hydraulics, channel geometry and channel morphology.
  7. Where shown culverts shall be 'embedded' with natural river deposits to the depth shown.
  8. Where shown 'cascades' are required to safely convey the design flood event (0.5% AEP (200-year) plus allowance for climate change). The cascade geometry shown on the drawing is indicative only and will be subject to further development at detailed design stage. The nature of the cascade will take one of the following forms,
    - Bedrock channel cascade.
    - Natural cascade with natural gravels, cobbles and rock forming individual steps.
    - Concrete cascade with stone pitching.
 The nature of the cascade will be determined at the detailed design stage taking into account hydraulic requirements, topography and nature of the underlying strata and its susceptibility to fluvial erosion.
  9. Where shown mammal ledges will be provided within the culvert in accordance with the relevant provisions of DMRB.

SCALE 1:200

**ELEVATION B-B**  
SCALE 1:100

**SECTION C-C**  
SCALE 1:50

- Notes.**
- All dimensions are in millimetres unless noted otherwise.
  - All levels are in metres Above Ordnance Datum.
  - All chainages are in metres.
  - All exposed arrises to have 25x25 chamfers unless noted otherwise.
  - Concrete finishes denoted thus:  
 (F) - Formed  
 (U) - Unformed
  - Concrete protection to be as follows:  
 (S) - Surface impregnation in accordance with BD43 of the DMRB.  
 (A) - Spray applied waterproofing in accordance with CI 2003 of the Specification.  
 (B) - Waterproofing of all buried concrete surfaces in accordance with CI 2004 of the Specification.
  - All details shown on this drawing are indicative only and subject to development.
  - Bedrock levels TBC. Should bedrock be determined in excess of 150mm below proposed apron levels, additional intermediate steps shall be introduced to lower watercourse incrementally to existing channel.

SAFETY, HEALTH AND ENVIRONMENTAL INFORMATION	
In addition to the hazards/risks normally associated with the types of work detailed on this drawing, note the following:	
<b>CONSTRUCTION</b>	
<ul style="list-style-type: none"> <li>Service survey required pre-construction</li> <li>Structure stability to be checked during and after break-out / partial demolition of existing structure</li> <li>Nature and position of the existing structure foundations to be verified pre-construction by undertaking investigations</li> <li>Position of structure may not be as shown</li> </ul>	
<b>MAINTENANCE / CLEANING</b>	
None	
<b>DECOMMISSIONING / DEMOLITION</b>	
None	
It is assumed that all works will be carried out by a competent contractor working, where appropriate, to an approved method statement

SCHEMATIC PLAN

WATERCOURSE 151 LONGSECTION

Legend:

	New culvert/extension
	Retained culvert
	Realigned/regraded channel
	Cascade
	Inlet/outlet headwall (new)
	Inlet/outlet headwall (retained)
	Pre-earthworks drain and outfall
	Access chamber
	Flow direction
	Invert Level

- Notes:
- All dimensions are in meters unless noted otherwise.
  - All levels are in meters above ordnance datum.
  - All details shown on this drawing are indicative only and subject to development at detailed design.
  - This drawing shall be read in conjunction with the 'Watercourse Crossing report' only and not in isolation.
  - All 'new' and 'extended' culverts have been designed in accordance with the relevant provisions of DMRB.
  - Where required 'scour protection measures' shall be provided within the zone indicated on the drawing. The nature and the extent of the scour protection measure will be further developed at detailed design stage in accordance with the relevant provisions of DMRB, taking into account flow hydraulics, channel geometry and channel morphology.
  - Where shown culverts shall be 'embedded' with natural river deposits to the depth shown.
  - Where shown 'cascades' are required to safely convey the design flood event (0.5% AEP (200-year) plus allowance for climate change). The cascade geometry shown on the drawing is indicative only and will be subject to further development at detailed design stage. The nature of the cascade will take one of the following forms,
    - Bedrock channel cascade.
    - Natural cascade with natural gravels, cobbles and rock forming individual steps.
    - Concrete cascade with stone pitching.
 The nature of the cascade will be determined at the detailed design stage taking into account hydraulic requirements, topography and nature of the underlying strata and its susceptibility to fluvial erosion.
  - Where shown mammal ledges will be provided within the culvert in accordance with the relevant provisions of DMRB.
